

**ABSTRACT**

A closure device for a convertible top includes a lateral roof frame, a hoop element, and a pivotable hook arranged on the lateral roof frame which can be brought into engagement with the hoop element. The closure device also includes a first sliding element, the hook being accommodated in a pivotable manner on the first sliding element, and a second sliding element, it being possible for pivoting of the hook to be driven by a drivable movement of the second sliding element relative to the first sliding element.
